# The Global Competitiveness Index 4.0 Methodology and Technical Notes

This appendix first presents the methodology and detailed structure of the Global Competitiveness Index 4.0 (GCI 4.0) in Section A. Section B lists the minor changes made to the methodology of the Index in 2019. Section C details the methods used to impute missing data points and reports the imputed values by indicator. Section D presents the methodology used to compute progress scores. Finally, Section E provides detailed descriptions and sources for each indicator included in the Index.

## A. COMPUTATION AND COMPOSITION OF THE GCI 4.0

The computation of the GCI 4.0 is based on successive aggregations of scores, from the indicator level (the most disaggregated level) to the overall GCI 4.0 score (the highest level). At every aggregation level, each aggregated measure is computed by taking the average (i.e. arithmetic mean) of the scores of its components, with a few exceptions described in Section D. The overall GCI 4.0 score is the average of the scores of the 12 pillars.

For individual indicators, prior to aggregation, raw values are transformed into a progress score ranging from 0 to 100, with 100 being the ideal state. See Section D for more details.

In the list below, weights are rounded to one decimal place, but full precision is used in the computation.

Weight (%) within  
immediate parent category

### ENABLING ENVIRONMENT

(not used in calculation)<sup>1</sup>

#### Pillar 1: Institutions..... 8.3%

##### A. Security..... 12.5%

- 1.01 Organized crime
- 1.02 Homicide rate
- 1.03 Terrorism incidence
- 1.04 Reliability of police services

##### B. Social capital ..... 12.5%

- 1.05 Social capital

##### C. Checks and balances..... 12.5%

- 1.06 Budget transparency
- 1.07 Judicial independence
- 1.08 Efficiency of legal framework in challenging regulations
- 1.09 Freedom of the press

<sup>1</sup> For presentation and analysis purposes, the 12 pillars are also organized into four overarching components—Enabling Environment, Human Capital, Markets, and Innovation Ecosystem—but these components do not enter into the computation of the GCI 4.0.

**D. Public-sector performance ..... 12.5%**

- 1.10 Burden of government regulation
- 1.11 Efficiency of legal framework in settling disputes
- 1.12 E-Participation

**E. Transparency ..... 12.5%**

- 1.13 Incidence of corruption

**F. Property rights ..... 12.5%**

- 1.14 Property rights
- 1.15 Intellectual property protection
- 1.16 Quality of land administration

**G. Corporate governance ..... 12.5%**

- 1.17 Strength of auditing and accounting standards
- 1.18 Conflict of interest regulation
- 1.19 Shareholder governance

**H. Future orientation of government ..... 12.5%****I. Government adaptability ..... 50%**

- 1.20 Government ensuring policy stability
- 1.21 Government's responsiveness to change
- 1.22 Legal framework's adaptability to digital business models
- 1.23 Government long-term vision

**II. Commitment to sustainability ..... 50%**

- 1.24 Energy efficiency regulation
- 1.25 Renewable energy regulation
- 1.26 Environment-related treaties in force

**Pillar 2: Infrastructure ..... 8.3%****A. Transport infrastructure<sup>2</sup> ..... 50%****I. Road ..... 25%**

- 2.01 Road connectivity
- 2.02 Quality of road infrastructure

**II. Railroad<sup>2</sup> ..... 25%**

- 2.03 Railroad density
- 2.04 Efficiency of train services

**III. Air ..... 25%**

- 2.05 Airport connectivity
- 2.06 Efficiency of air transport services

**IV. Sea ..... 25%**

- 2.07 Liner shipping connectivity<sup>3</sup>
- 2.08 Efficiency of seaport services

**B. Utility infrastructure ..... 50%****I. Electricity ..... 50%**

- 2.09 Electricity access
- 2.10 Electricity supply quality

**II. Water ..... 50%**

- 2.11 Exposure to unsafe drinking water
- 2.12 Reliability of water supply

**Pillar 3: ICT adoption<sup>4</sup> ..... 8.3%**

- 3.01 Mobile-cellular telephone subscriptions
- 3.02 Mobile-broadband subscriptions
- 3.03 Fixed-broadband internet subscriptions
- 3.04 Fibre internet subscriptions
- 3.05 Internet users

**Pillar 4: Macroeconomic stability ..... 8.3%**

- 4.01 Inflation
- 4.02 Debt dynamics

**HUMAN CAPITAL**(not used in calculation)<sup>5</sup>**Pillar 5: Health ..... 8.3%**

- 5.01 Healthy life expectancy

**Pillar 6: Skills ..... 8.3%****A. Current workforce ..... 50%****I. Education of current workforce ..... 50%**

- 6.01 Mean years of schooling

**II. Skills of current workforce ..... 50%**

- 6.02 Extent of staff training
- 6.03 Quality of vocational training
- 6.04 Skillset of graduates
- 6.05 Digital skills among active population
- 6.06 Ease of finding skilled employees

**B. Future workforce ..... 50%****I. Education of future workforce ..... 50%**

- 6.07 School life expectancy

**II. Skills of future workforce ..... 50%**

- 6.08 Critical thinking in teaching
- 6.09 Pupil-to-teacher ratio in primary education

**MARKETS**(not used in calculation)<sup>5</sup>**Pillar 7: Product market ..... 8.3%****A. Domestic market competition ..... 50%**

- 7.01 Distortive effect of taxes and subsidies on competition
- 7.02 Extent of market dominance
- 7.03 Competition in services

**B. Trade openness ..... 50%**

- 7.04 Prevalence of non-tariff barriers
- 7.05 Trade tariffs
- 7.06 Complexity of tariffs
- 7.07 Border clearance efficiency

2 For economies where there is no regular train service or where the network covers only a negligible portion of the territory, the Transport infrastructure sub-pillar corresponds to the average score of the Road, Air and Sea components. Assessment of the existence of a network was conducted by the World Economic Forum based on various sources.

3 For landlocked countries, this indicator is not included in the computation and the Sea component score corresponds to the score of indicator 2.08.

4 In computing the score of this pillar, indicator 3.02 is not directly used in the calculation. Instead the ratio of indicator 3.02 to indicator 3.01 is used, as an approximation of the share of mobile-cellular telephone subscriptions that have broadband capability. The same approach is used for indicator 3.04, as a way to approximate the share of fixed broadband connections that are optical fibre subscriptions. In both cases, the ratios are converted onto 0–100 scale and used in the computation, as explained in Section C.

5 For presentation and analysis purposes, the 12 pillars are also organized into four overarching components—Enabling Environment, Human Capital, Markets, and Innovation Ecosystem—but these components do not enter into the computation of the GCI 4.0.

**Pillar 8: Labour market.....8.3%****A. Flexibility .....50%**

- 8.01 Redundancy costs
- 8.02 Hiring and firing practices
- 8.03 Cooperation in labour-employer relations
- 8.04 Flexibility of wage determination
- 8.05 Active labour market policies
- 8.06 Workers' rights
- 8.07 Ease of hiring foreign labour
- 8.08 Internal labour mobility

**B. Meritocracy and incentivization.....50%**

- 8.09 Reliance on professional management
- 8.10 Pay and productivity
- 8.11 Ratio of wage and salaried female workers to male workers
- 8.12 Labour tax rate

**Pillar 9: Financial system<sup>6</sup>.....8.3%****A. Depth**

- 9.01 Domestic credit to private sector
- 9.02 Financing of SMEs
- 9.03 Venture capital availability
- 9.04 Market capitalization
- 9.05 Insurance premium

**B. Stability**

- 9.06 Soundness of banks
- 9.07 Non-performing loans
- 9.08 Credit gap
- 9.09 Banks' regulatory capital ratio

**Pillar 10: Market size<sup>7</sup>.....8.3%**

- 10.01 Gross domestic product
- 10.02 Imports of goods and services

**INNOVATION ECOSYSTEM**(not used in calculation)<sup>8</sup>**Pillar 11: Business dynamism.....8.3%****A. Administrative requirements .....50%**

- 11.01 Cost of starting a business
- 11.02 Time to start a business
- 11.03 Insolvency recovery rate
- 11.04 Insolvency regulatory framework

6 The score of this pillar corresponds to the average of the scores of the nine individual indicators (9.01–9.09). Components A and B are used for presentation purposes only, and do not enter the calculation.

7 The score of this pillar corresponds to the natural logarithm (LN) of the sum of GDP and imports, valued at purchasing power parity (PPP). Valuation of imports at PPP is estimated by multiplying the share of imports (indicator 10.02) by the value of GDP (indicator 10.01). Score of pillar 10 =  $\text{LN}(\text{GDP} + \text{IMPORT}/100 \times \text{GDP})$ .

8 For presentation and analysis purposes, the 12 pillars are also organized into four overarching components—Enabling environment, Human capital, Markets, and Innovation ecosystem—but these components do not enter into the computation of the GCI 4.0.

**B. Entrepreneurial culture .....50%**

- 11.05 Attitudes towards entrepreneurial risk
- 11.06 Willingness to delegate authority
- 11.07 Growth of innovative companies
- 11.08 Companies embracing disruptive ideas

**Pillar 12: Innovation capability<sup>9</sup>.....8.3%****A. Diversity and collaboration**

- 12.01 Diversity of workforce
- 12.02 State of cluster development
- 12.03 International co-inventions
- 12.04 Multistakeholder collaboration

**B. Research and development**

- 12.05 Scientific publications
- 12.06 Patent applications
- 12.07 R&D expenditures
- 12.08 Research institutions prominence index

**C. Commercialization**

- 12.09 Buyer sophistication
- 12.10 Trademark applications

**B. CHANGES TO THE METHODOLOGY**

Following the introduction of the GCI 4.0 methodology in the 2018 edition, minor changes have been made to the methodology this year. These changes are based on additional feedback received in the past year or made necessary as a result of data that is no longer being collected. They do not affect in any major way the comparability of results across the two editions.

**Pillar 1: Institutions**

- Budget transparency (indicator 1.06) is now assessed using the Open Budget Index, sourced from the International Budget Project. This indicator replaces the Open Budget Data score, which has been discontinued.
- Former indicator 1.13, Future orientation of government, which is comprised of four indicators derived from the Executive Opinion Survey, is now sub-pillar H of Pillar 1 (see Section A). The four indicators remain and are complemented by three new indicators: Energy efficiency regulation (indicator 1.24), Renewable energy regulation (1.25) and Environment-related treaties in force (1.26), which collectively measure a government's commitment to sustainability, an indication of its future orientation. As a result of these changes, the numbering of indicators in Pillar 1 was modified according to the new order.

9 The score of this pillar corresponds to the average of the scores of the underlying 10 individual indicators (12.01–12.10). Components A, B and C are used for presentation purposes only and do not enter the calculation.

### Pillar 7: Product market

The Service Trade Restrictiveness Index has been dropped owing both to the absence of updates to that index and to the fact that different methodologies are used to assess countries. These changes make any cross-country and time comparison impossible. By no means should this exclusion be interpreted as implying that services are no longer relevant for competitiveness.

### Pillar 8: Labour market

Indicator 8.08, Internal labour mobility, no longer applies to city states, as the concept of internal mobility is of little relevance in such small economies. Bahrain, Brunei Darussalam, Hong Kong SAR, Kuwait, Malta, Qatar and Singapore were identified as city states.

## C. MISSING DATA IMPUTATION

Missing and outdated values (the cut-off year varies by indicator) are imputed for the purpose of the calculation. Table 1 (page page 611) presents the imputation method and the imputed values by indicator. Note that the Economy Profiles and interactive ranking tables (available online at <http://www.weforum.org/gcr>) do not report imputed values.

## D. COMPUTATION OF PROGRESS SCORES AND FRONTIER VALUES

To allow the aggregation of indicators of different nature and magnitude, each indicator entering the GCI 4.0 is converted into a unit-less score, called “progress score”, ranging from 0 to 100 using a min-max transformation. Formally, each indicator is re-scaled according to the following formula:

$$score_{ic} = \left( \frac{value_{ic} - wp_i}{frontier_i - wp_i} \right) \times 100,$$

where  $value_{ic}$  is the “raw” value of country  $c$  for indicator  $i$ ,  $wp_i$  is the lowest acceptable value for indicator  $i$  and  $frontier_i$  corresponds to the best possible outcome. Depending on the indicator, the frontier may be a policy target or aspiration, the maximum possible value, or a number derived from statistical analysis of the distribution (e.g. 90th or 95th percentile). If a value is below the worst performance value, its score is 0; if a value is above the frontier value, its score is capped at 100. When a logarithmic transformation is applied on an indicator, the same transformation is applied to the frontier and worst performance values displayed in Table 1.

In the case of indicators derived from the Executive Opinion Survey,  $frontier_i$  and  $wp_i$  are always 7 and 1, respectively. These values correspond to the two extreme answers of any questions.

Table 2 (page page 631) provides the actual floor and frontier values used for the normalization of each individual indicator. In a few cases, reported in the table, a logarithmic transformation is applied to the raw value prior to conversion.

## E. INDICATOR DEFINITIONS AND SOURCES

The following notes provide sources for all the individual indicators included in the GCI 4.0. The title of each indicator appears on the first line, preceded by its number to allow for quick reference. Below is a description of each indicator or, in the case of Executive Opinion Survey data, the full question and associated answers. If necessary, additional information is provided underneath.

The interactive ranking tables at [www.weforum.org/gcr/rankings](http://www.weforum.org/gcr/rankings) provide information about the source and period for each individual data point. Select the indicator of interest from the selector and click on the “info” icon next to each economy to access the information. For indicators not sourced from the World Economic Forum, users are urged to refer to the original source for any additional information and exceptions for certain economies and/or data points. “Terms of Use and Disclaimer” on page ii of this report provide information about using the data.

The data used in the computation of the GCI 4.0 2019 represents the most recent and best data available at the time when it was collected (March–July 2019). It is possible that data was updated or revised subsequently.

### Pillar 1: Institutions

#### 1.01 Organized crime

**Response to the survey question “In your country, to what extent does organized crime (mafia-oriented racketeering, extortion) impose costs on businesses?” [1 = to a great extent, imposes huge costs; 7 = not at all, imposes no costs] | 2018–2019 weighted average or most recent period available**

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

#### 1.02 Homicide rate

**Number of intentional homicides per 100,000 population | 2017 or most recent year available**

“Intentional homicide” refers to unlawful death inflicted upon a person with the intent to cause death or serious injury. More details about the methodology can be found at <https://data.unodc.org/crime/intentional-homicide-victims>.

Sources: United Nations Office on Drugs and Crime, Homicide Dataset 2019 (<https://data.unodc.org/>); World Health Organization (WHO), WHO Global Health Estimates 2015 (<http://apps.who.int/violence-info/>).

**1.03 Terrorism incidence**

Assesses the frequency and severity of terror attacks. The scale ranges from 0 (highest incidence) to 100 (no incidence) | Weighted count 2013–2017

This indicator has two components: the number of terrorism-related casualties (injuries and fatalities) and the number of terrorist attacks over a five-year period, with each year assigned half the weight of the following year. Each component is normalized on a 0 to 100 scale, with 100 meaning “no casualty” and “no attack”, respectively, and then averaged.

Source: World Economic Forum calculations based on National Consortium for the Study of Terrorism and Responses to Terrorism (<https://www.start.umd.edu/>).

**1.04 Reliability of police services**

Response to the survey question “In your country, to what extent can police services be relied upon to enforce law and order?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.05 Social capital**

Score on the Social Capital pillar of the Legatum Prosperity Index™, which assesses social cohesion and engagement, community and family networks, and political participation and institutional trust. The scale ranges from 0 (low) to 100 (high) | 2018 edition

This indicator measures national performance in three areas: social cohesion and engagement (bridging social capital), community and family networks (bonding social capital), and political participation and institutional trust (linking social capital). More details about the methodology can be found at <http://www.prosperity.com/about/methodology>.

Source: Legatum Institute, The Legatum Prosperity Index 2018 (<http://www.prosperity.com/about/resources>).

**1.06 Budget transparency**

Assesses the amount and timeliness of budget information that governments make publicly available | 2017

The index assigns countries covered by the Open Budget Survey a transparency score on a 100-point scale using a subset of questions that assess the amount and timeliness of budget information that governments make publicly available in eight key budget documents in accordance with international good practice standards. The eight key documents are: Pre-Budget Statement; Executive’s Budget Proposal and Supporting Documents for the Executive’s Budget Proposal; Enacted Budget; Citizens Budget; In-Year Reports; Mid-Year Review; Year-End Report; and Audit Report. For more information about the index and underlying survey methodologies, see <https://www.internationalbudget.org/open-budget-survey/methodology/>.

Source: International Budget Partnership, The Open Budget Survey 2017 (<https://www.internationalbudget.org/open-budget-survey/>).

**1.07 Judicial independence**

Response to the survey question “In your country, how independent is the judicial system from influences of the government, individuals, or companies?” [1 = not independent at all; 7 = entirely independent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.08 Efficiency of legal framework in challenging regulations**

Response to the survey question “In your country, how easy is it for private businesses to challenge government actions and/or regulations through the legal system?” [1 = extremely difficult; 7 = extremely easy] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.09 Freedom of the press**

Score on the World Press Freedom Index, which measures the level of freedom available to journalists. The scale ranges from 0 (good) to 100 (very bad) | 2019 edition

The index measures media independence, the quality of the infrastructure that supports the production of news, and information and acts of violence against journalists. It is based on two sources: (1) a database of the level of abuses and violence against journalists and media; and (2) an expert opinion survey on pluralism, media independence, self-censorship, transparency and infrastructure in each country. More details about the methodology can be found at <https://rsf.org/en/world-press-freedom-index>.

Source: Reporters Without Borders (RSF), World Press Freedom Index 2019 (<https://rsf.org/en/world-press-freedom-index>).

**1.10 Burden of government regulation**

Response to the survey question “In your country, how burdensome is it for companies to comply with public administration’s requirements (e.g. permits, regulations, reporting)?” [1 = extremely burdensome; 7 = not burdensome at all] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.11 Efficiency of legal framework in settling disputes**

Response to the survey question “In your country, how efficient are the legal and judicial systems for companies in settling disputes?” [1 = extremely inefficient; 7 = extremely efficient] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.12 E-Participation**

Score on the E-Participation Index, which assesses the use of online services to facilitate the provision of information by governments to citizens. The scale ranges from 0 to 1 (best) | 2018 edition

The E-Participation Index measures the use of online services to facilitate provision of information by governments to citizens (“e-information sharing”), interaction with stakeholders (“e-consultation”) and engagement in decision-making processes (“e-decision making”). More details about the methodology can be found at <https://publicadministration.un.org>.

Source: United Nations, Department of Economic and Social Affairs, *E-Government Survey 2018: Gearing E-Government To Support Transformation Towards Sustainable And Resilient Societies* (July 2018).

**1.13 Incidence of corruption**

Score on the Corruption Perceptions Index, which measures perceptions of corruption in the public sector. This is a composite indicator, and the scale ranges from 0 (highly corrupt) to 100 (very clean) | 2018 edition

The index aggregates data from a number of different sources that provide perceptions of business people and country experts of the level of corruption in the public sector. More details about the methodology can be found at <https://www.transparency.org/cpi>.

Source: Transparency International, Corruption Perceptions Index 2018 (<https://www.transparency.org/cpi2018>).

**1.14 Property rights**

Response to the survey question "In your country, to what extent are property rights, including financial assets, protected?" [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.15 Intellectual property protection**

Response to the survey question "In your country, to what extent is intellectual property protected?" [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.16 Quality of land administration**

Score on the quality of land administration index, which assesses the reliability of infrastructure, transparency of information, geographic coverage, land dispute resolution and equal access to property rights. The scale ranges from 0 to 30 (best) | 2018

The index has five components: reliability of infrastructure, transparency of information, geographic coverage, land dispute resolution, and equal access to property rights. Data is collected for each economy's largest business city. More details about the methodology can be found at <http://www.doingbusiness.org/Methodology>.

Source: World Bank Group, *Doing Business 2019: Training for Reform*.

**1.17 Strength of auditing and accounting standards**

Response to the survey question "In your country, how strong are financial auditing and reporting standards?" [1 = extremely weak; 7 = extremely strong] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.18 Conflict of interest regulation**

Score on the extent of conflict of interest regulation index, which measures the protection of shareholders against directors' misuse of corporate assets for personal gain. The scale ranges from 0 to 10 (best) | 2018

The index assesses three dimensions of regulation that address conflicts of interest: 1) transparency of related-party transactions, 2) shareholders' ability to sue and hold directors liable for self-dealing, and 3) access to evidence and allocation of legal expenses in shareholder litigation. More details about the methodology can be found at <http://www.doingbusiness.org/Methodology>.

Source: World Bank Group, *Doing Business 2019: Training for Reform*.

**1.19 Shareholder governance**

Score on the extent of shareholder governance index, which measures shareholders' rights in corporate governance. The scale ranges from 0 to 10 (best) | 2018

The index assesses three dimensions of good governance: (1) shareholders' rights and role in major corporate decisions, (2) governance safeguards protecting shareholders from undue board control and entrenchment, and (3) corporate transparency on ownership stakes, compensation, audits and financial prospects. More details about the methodology can be found at <http://www.doingbusiness.org/Methodology>.

Source: World Bank Group, *Doing Business 2019: Training for Reform*.

**1.20 Government ensuring policy stability**

Response to the survey question "In your country, to what extent does the government ensure a stable policy environment for doing business?" [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.21 Government's responsiveness to change**

Response to the survey question "In your country, to what extent does the government respond effectively to change (e.g. technological changes, societal and demographic trends, security and economic challenges)?" [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.22 Legal framework's adaptability to digital business models**

Response to the survey question "In your country, how fast is the legal framework of your country adapting to digital business models (e.g. e-commerce, sharing economy, fintech, etc.)?" [1 = not fast at all; 7 = very fast] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.23 Government long-term vision**

Response to the survey question "In your country, to what extent does the government have a long-term vision in place?" [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**1.24 Energy efficiency regulation**

Assesses a country's policies and regulations to promote energy efficiency. The score ranges from 0 (not conducive) to 100 (very conducive) | 2017

The score is based on a country's performance on 12 indicators: National energy efficiency planning; Energy efficiency entities; Information provided to consumers about electricity usage; EE incentives from electricity rate structures; Incentives & mandates: Industrial and Commercial End users; Incentives & mandates: Public sector; Incentives & mandates: Utilities; Financing mechanisms for energy efficiency; Minimum energy efficiency performance standards; Energy labelling systems; Building energy codes; Transport; and Carbon Pricing and Monitoring. For more information, see <https://rise.worldbank.org/indicators#pillar-energy-efficiency>.

Source: The World Bank/ESMAP, *Policy Matters: Regulatory Indicators for Sustainable Energy (RISE) 2018* (<https://rise.worldbank.org/reports>, <https://rise.worldbank.org/scores>).

**1.25 Renewable energy regulation**

**Assesses a country's policies and regulations to promote renewable energies. The score ranges from 0 (not conducive) to 100 (very conducive) | 2017**

The score is based on a country's performance in seven indicators: Legal framework for renewable energy; Planning for renewable energy expansion; Incentives and regulatory support for renewable energy; Attributes of financial and regulatory incentives; Network connection and use; Counterparty risk; Carbon Pricing; and Monitoring. For more information, see <https://rise.worldbank.org/indicators#pillar-renewable-energy>.

Source: The World Bank/ESMAP, *Policy Matters: Regulatory Indicators for Sustainable Energy (RISE) 2018* (<https://rise.worldbank.org/reports>, <https://rise.worldbank.org/scores>).

**1.26 Environment-related treaties in force**

**Total number of ratified environmental treaties (0–29 scale, where 29 is best) | Status as of 25 February 2019**

This indicator measures the total number of international treaties from a set of 29 for which a state is a participant. A state is acknowledged as a participant whenever its status for each treaty appears as Ratified, Accession, or In Force. The treaties included are: the International Convention for the Regulation of Whaling, 1946 Washington; the Convention on Wetlands of International Importance especially as Waterfowl Habitat, 1971 Ramsar; the Convention Concerning the Protection of the World Cultural and Natural Heritage, 1972 Paris; the Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter, 1972 London, Mexico City, Moscow, Washington; the Convention on International Trade in Endangered Species of Wild Fauna and Flora, 1973 Washington; the International Convention for the Prevention of Pollution from Ships (MARPOL) as modified by the Protocol of 1978, London; the Convention on the Conservation of Migratory Species of Wild Animals, 1979 Bonn; the United Nations Convention on the Law of the Sea, 1982 Montego Bay; the Convention on the Protection of the Ozone Layer, 1985 Vienna; the Protocol on Substances that Deplete the Ozone Layer, 1987 Montreal; the Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1989 Basel; the International Convention on Oil Pollution Preparedness, Response and Co-operation, 1990 London; the United Nations Framework Convention on Climate Change, 1992 New York; the Convention on Biological Diversity, 1992 Rio de Janeiro; the International Convention to Combat Desertification in Those Countries Experiencing Serious Drought and/or Desertification, particularly Africa, 1994 Paris; the Agreement relating to the Implementation of Part XI of the United Nations Convention on the Law of the Sea of 10 December 1982, 1994 New York; the Agreement relating to the Provisions of the United Nations Convention on the Law of the Sea relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks, 1995 New York; the Kyoto Protocol to the United Nations Framework Convention on the Climate Change, Kyoto 1997; the Convention on the Law of the Non-navigational Uses of International Watercourses, 1997; the Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade, 1998 Rotterdam; the Cartagena Protocol of Biosafety to the Convention on Biological Diversity, 2000 Montreal; the Protocol on Preparedness, Response and Co-operation to Pollution Incidents by Hazardous and Noxious Substances, 2000 London; the Stockholm Convention on Persistent Organic Pollutants, 2001 Stockholm; the International Treaty on Plant Genetic Resources for Food and Agriculture, 2001 Rome; the International Tropical Timber Agreement, 2006 Geneva; the Supplementary Protocol on Liability and Redress to the Cartagena Protocol on Biosafety, 2010 Nagoya – Kuala Lumpur; the Protocol on Access to Genetic Resources and their Fair and Equitable Sharing of Benefits Arising from their Utilization to the Convention on Biological Diversity, Nagoya 2010; the Convention on Mercury, Minamata, 2013; and the Paris Agreement 2015.

Source: The International Union for Conservation of Nature (IUCN) Environmental Law Centre ELIS Treaty Database (data received through direct communication).

**Pillar 2: Infrastructure****2.01 Road connectivity**

**Score on the Road Connectivity Index, which measures average speed and straightness of a driving itinerary connecting the 10 or more largest cities that together account for at least 15% of the economy's total population. The scale ranges from 0 to 100 (excellent) | 43612**

This Index, developed by the World Economic Forum, comprises two elements: (1) a measure of the average speed of a driving itinerary connecting the 10 or more largest cities in an economy accounting for at least 15% of the economy's total population; and (2) a measure of road straightness. The itinerary was not optimized and connects the cities from the largest to the smallest. Any leg involving a ferry was excluded from the average speed calculation. As a first step to the identification of cities to include in the itinerary, pairwise distances ("as the crow flies") were calculated, and when the distance was less than 20 kilometres, the smallest city in the pair was excluded. The road straightness corresponds to the ratio of the sum of driving distances between each city in the journey to the sum of crow-fly distances between each city in the journey. For this component, legs involving a ferry were included. The APIs of Google Directions and Open Street Map were used to compute the itinerary. The Geonames database (accessed on 8 May 2019) was used for city populations and coordinates. For more information about this indicator, please contact [gcp@weforum.org](mailto:gcp@weforum.org).

Source: World Economic Forum's calculations.

**2.02 Quality of road infrastructure**

**Response to the survey question "In your country, what is the quality (extensiveness and condition) of road infrastructure?" [1 = extremely poor—among the worst in the world; 7 = extremely good—among the best in the world] | 2018–2019 weighted average or most recent period available**

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**2.03 Railroad density**

**Kilometres of railroad per 1,000 square kilometres of land | 2017 or most recent year available**

Source: The World Bank Group, *World Development Indicators* database (<https://data.worldbank.org/>, accessed 29 April 2019) and national sources.

**2.04 Efficiency of train services**

**Response to the survey question "In your country, how efficient (i.e. frequency, punctuality, speed, price) are train transport services?" [1 = extremely inefficient, among the worst in the world; 7 = extremely efficient, among the best in the world] | 2018–2019 weighted average or most recent period available**

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**2.05 Airport connectivity**

This represents the IATA airport connectivity indicator, which measures the degree of integration of a country within the global air transport network | 2018

For each airport, the number of available seats to each destination is weighted by the size of the destination airport (in terms of number of passengers handled). The weighted totals are then summed for all destinations, then for all airports in the country to produce a score. A log transformation is applied to the raw value before converting it to the 0 to 100 score.

Source: International Air Transport Association (IATA) (data received through direct communication).

**2.06 Efficiency of air transport services**

Response to the survey question “In your country, how efficient (i.e. frequency, punctuality, speed, price) are air transport services?” [1 = extremely inefficient, among the worst in the world; 7 = extremely efficient, among the best in the world] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**2.07 Liner shipping connectivity**

Score on the Liner Shipping Connectivity Index, which assesses a country's connectivity to global shipping networks. The index uses an open scale, with the benchmark score of 100 corresponding to the most connected country in 2004 (China). Does not apply to land-locked countries. | 2017

The index is based on five components of the maritime transport sector: the number of ships, their container-carrying capacity, the maximum vessel size, the number of services and the number of companies that deploy container ships in a country's ports.

Source: United Nations Conference on Trade and Development (UNCTAD), UNCTAD, Division on Technology and Logistics (<http://stats.unctad.org/LSCI>, accessed 4 April 2019).

**2.08 Efficiency of seaport services**

Response to the survey question “In your country, how efficient (i.e. frequency, punctuality, speed, price) are seaport services (ferries, boats)?” [1 = extremely inefficient, among the worst in the world; 7 = extremely efficient, among the best in the world]. Does not apply to land-locked countries. | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**2.09 Electricity access**

Percentage of population with access to electricity | 2017 estimate

Electricity access entails a household having initial access to sufficient electricity to power a basic bundle of energy services—at a minimum, several lightbulbs, task lighting (such as a flashlight), phone.

Sources: International Energy Agency, World Energy Outlook 2018 (<https://www.iea.org/weo2018/>); The World Bank Group, Sustainable Energy for All database (<https://datacatalog.worldbank.org/dataset/sustainable-energy-all>, accessed 21 March 2019); national sources.

**2.10 Electricity supply quality**

Electric power transmission and distribution losses as a percentage of domestic supply | 2016 estimate

Electric power transmission and distribution losses are losses in transmission between sources of supply and points of distribution and in the distribution to consumers, including pilferage.

Source: International Energy Agency, Energy Data Centre (data received through direct communication).

**2.11 Exposure to unsafe drinking water**

Risk-weighted percentage of population exposed to unsafe drinking water | 2017 estimate

This indicator is reported as a summary exposure value (SEV): it measures a population's exposure to unsafe drinking water, taking into account the extent of exposure by risk level and the severity of that risk's contribution to disease burden. The indicator ranges from 0, when no excess risk for a population exists, to 1, when the population is at the highest level of risk.

Source: Institute for Health Metrics and Evaluation, *Global Burden of Disease 2017* (<http://www.healthdata.org/gbd/>).

**2.12 Reliability of water supply**

Response to the survey question “In your country, how reliable is the water supply (lack of interruptions and flow fluctuations)?” [1 = extremely unreliable; 7 = extremely reliable] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**Pillar 3: ICT adoption****3.01 Mobile-cellular telephone subscriptions**

Number of mobile-cellular telephone subscriptions per 100 population | 2018 or most recent period available

This indicator includes post-paid subscriptions, active prepaid accounts (i.e. that have been active during the past three months) and all mobile-cellular subscriptions that offer voice communications.

Source: International Telecommunication Union, *World Telecommunication/ICT Indicators* database (June 2019 edition).

**3.02 Mobile-broadband subscriptions**

Number of active mobile-broadband subscriptions per 100 population | 2018 or most recent period available

This indicator includes standard mobile-broadband subscriptions and dedicated mobile-broadband data subscriptions to the public internet.

Source: International Telecommunication Union, *World Telecommunication/ICT Indicators* database (June 2019 edition).

**3.03 Fixed-broadband internet subscriptions**

**Number of fixed-broadband internet subscriptions per 100 population | 2018 or most recent period available**

This indicator refers to the number of subscriptions for high-speed access to the public internet (a TCP/IP connection), including cable modem, DSL, fibre, and other fixed (wired)-broadband technologies—such as Ethernet, LAN and broadband over powerline communications.

Source: International Telecommunication Union, *World Telecommunication/ICT Indicators* database (June 2019 edition).

**3.04 Fibre internet subscriptions**

**Fibre-to-the-home/building internet subscriptions per 100 population | 2017 or most recent period available**

This indicator refers to the number of internet subscriptions using fibre-to-the-home or fibre-to-the-building at downstream speeds equal to or greater than 256 kb/s. This should include subscriptions where fibre goes directly to the subscriber's premises or fibre-to-the-building subscriptions that terminate no more than two metres from an external wall of the building. Fibre-to-the-cabinet and fibre-to-the-node are excluded.

Source: International Telecommunication Union, *World Telecommunication/ICT Indicators* database (June 2019 edition).

**3.05 Internet users**

**Percentage of individuals who used the internet from any location and for any purpose, irrespective of the device and network used, in the last three months | 2018 or most recent period available**

Source: International Telecommunication Union, *World Telecommunication/ICT Indicators* database (June 2019 edition).

**Pillar 4: Macroeconomic stability****4.01 Inflation**

**Annual percentage change in the Consumer Price Index | Average 2017–2018**

Inflation is normalized in a U-shaped function to capture the detrimental effects of high inflation and deflation. Countries with inflation rates between 0.5% and 4% receive the highest possible score of 100. Outside this range, scores decrease linearly as the distance between the optimal value and the actual value increases. Because of the special conversion applied to this indicator, the ranking for this indicator is based on progress scores rather than raw values.

Source: International Monetary Fund, *World Economic Outlook* database (April 2019 edition).

**4.02 Debt dynamics**

**Index measuring the change in public debt, weighted by a country's credit rating and debt level in relation to its GDP | 2018–2019**

This indicator is a category-based min-max normalization of the debt change. The debt change is the difference between the 2017 and 2018 of the debt-to-GDP ratio expected values. To transform the debt change value into a 0 to 100 score, each country was assigned to a specific category that determined the value boundaries. Categories are based on three criteria: general credit rating, government debt-to-GDP level for the year 2017, and country classification (1 if country is considered advanced, 0 otherwise, according to IMF's classification). The general credit rating for each country is computed as the average of Fitch, Standard and Poor's (S&P) and Moody's credit ratings. A country's rating is considered "investment grade 1" for S&P's grades AAA to A, Moody's grades Aaa to A1, and Fitch's grades AAA to A. A country's rating is considered "investment grade 2" for S&P's grades A– to BBB–, Moody's grades Baa3 to Baa1, and Fitch's grades A– to BBB+. A country's rating is considered "speculative" for S&P's grades BB+ to CCC+, Moody's grades Ba3 to Caa2, and Fitch's grades BBB– to B–. A country credit rating is considered "default" for S&P's grade SD, Moody's grades Caa1 and C, and Fitch's grades CC and RD. Based on these criteria, 12 cases were identified: (1) if a country's average rating is rated as "investment grade 1" and its debt-to-GDP level is less than 60%, its debt change is normalized 100; (2) if a country's average rating is rated as "investment grade 1" and its debt-to-GDP level is less than 110%, its debt change is normalized to a score between 90 and 100; (3) if a country's average rating is graded as "investment grade 1" and its debt-to-GDP level is greater than 110%, its debt change is normalized to a score between 80 and 90; (4) if the average credit rating is rated as "investment grade 2" and the debt level is lower than 110%, its debt change is normalized to a score between 70 and 80; (5) if the average credit rating is "investment grade 2" and the debt level is greater than 110%, its debt change is normalized to a score between 60 and 70; (6) if the average credit rating is "speculative", the debt level is less than 110% and the country classification is "advanced", its debt change is normalized to a score between 50 and 60; (7) if the average credit rating is "speculative", the debt level is greater than 110% and the country classification is "advanced", its debt change is normalized to a score between 40 and 50; (8) if the average credit rating is "speculative", the debt level is less than 60% and the country classification is "developing", its debt change is normalized to a score between 40 and 50; (9) if the average credit rating is "speculative", the debt level is greater than 60% and the country classification is "developing", its debt change is normalized to a score between 30 and 40; (10) if the average credit rating is "default", the debt change is normalized to a score between 0 and 30; (11) if a country does not receive a credit rating from any rating agency and its debt level is below 60%, its debt change is normalized to a score between 40 and 50; and (12) if a country does not receive a credit rating from a rating agency and its debt is above 60% of GDP, its debt change is normalized to a score between 30 and 40. To determine the final value of the debt dynamics indicator within the assigned boundaries, we've calculated the normalized debt change, which ranges from a minimum observed value of 0 and the maximum observed value of 20. As part of the normalization process, we assigned a score equivalent to the minimum value of each bracket if the debt change was 20% or higher; assigned the maximum value of the bracket if the debt change was 0% or lower; and assigned a score between the two values if the debt change was between 0% and 20%.

Sources: World Economic Forum; calculations based on data from International Monetary Fund and rating agencies.

## Pillar 5: Health

### 5.01 Healthy life expectancy

Number of years that a newborn can expect to live in good health, taking into account mortality and disability | 2017 estimate

More details about the methodology can be found at <http://www.healthdata.org/research-article/gbd-2015-dalys-hale>.

Source: Institute for Health Metrics and Evaluation, Global Burden of Disease 2017 (<http://www.healthdata.org/gbd/>).

## Pillar 6: Skills

### 6.01 Mean years of schooling

Mean years of schooling | 2016 or most recent year available

Average number of completed years of education of a country's population aged 25 years and older, excluding years spent repeating individual grades.

Sources: United Nations Educational, Scientific and Cultural Organization (UNESCO); Wittgenstein Centre for Demography and Global Human Capital (<http://www.oew.ac.at/vid/dataexplorer/>; accessed through the World Bank Data Catalog).

### 6.02 Extent of staff training

Response to the survey question "In your country, to what extent do companies invest in training and employee development?" [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

### 6.03 Quality of vocational training

Response to the survey question "In your country, how do you assess the quality of vocational training?" [1 = extremely poor among the worst in the world; 7 = excellent among the best in the world] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

### 6.04 Skillset of graduates

Average score of the following two Executive Opinion Survey questions: "In your country, to what extent do graduating students from secondary education possess the skills needed by businesses?" and "In your country, to what extent do graduating students from university possess the skills needed by businesses?" In each case, the answer ranges from 1 (not at all) to 7 (to a great extent). | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

### 6.05 Digital skills among active population

Response to the survey question "In your country, to what extent does the active population possess sufficient digital skills (e.g. computer skills, basic coding, digital reading)?" [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

### 6.06 Ease of finding skilled employees

Response to the survey question "In your country, to what extent can companies find people with the skills required to fill their vacancies?" [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

### 6.07 School life expectancy

Total number of years of schooling (primary through tertiary) that a child of school entrance age can expect to receive | 2017 or most recent period available

This indicator assumes that the probability of a person being enrolled in school at any particular future age is equal to the current enrolment ratio at that age. More details about the methodology can be found at <http://uis.unesco.org/en/glossary>.

Source: United Nations Educational, Scientific and Cultural Organization (UNESCO), UNESCO Institute for Statistics (UIS) (<http://data.uis.unesco.org>, accessed 18 April 2019).

### 6.08 Critical thinking in teaching

Response to the survey question "In your country, how do you assess the style of teaching?" [1 = frontal, teacher based, and focused on memorizing; 7 = encourages creative and critical individual thinking] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

### 6.09 Pupil-to-teacher ratio in primary education

Average number of pupils per teacher, based on headcounts of both pupils and teachers | 2017 or most recent period available

Source: The World Bank Group, *World Development Indicators* (<https://data.worldbank.org/>, accessed 18 April 2019).

## Pillar 7: Product market

### 7.01 Distortive effect of taxes and subsidies on competition

Response to the survey question "In your country, to what extent do fiscal measures (subsidies, tax breaks, etc.) distort competition?" [1 = distort competition to a great extent; 7 = do not distort competition at all] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

### 7.02 Extent of market dominance

Response to the survey question "In your country, how do you characterize corporate activity?" [1 = dominated by a few business groups; 7 = spread among many firms]. | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**7.03 Competition in services**

Average of the scores of the three components of the following Executive Opinion Survey question: “In your country, how competitive is the provision of the following services: professional services (legal services, accounting, engineering, etc.); retail services; and network sector (telecommunications, utilities, postal, transport, etc.)?” In each case, the answer ranges from 1 (not at all competitive) to 7 (extremely competitive). | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**7.04 Prevalence of non-tariff barriers**

Response to the survey question “In your country, to what extent do non-tariff barriers (e.g. health and product standards, technical and labelling requirements, etc.) limit the ability of imported goods to compete in the domestic market?” [1 = strongly limit; 7 = do not limit at all] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**7.05 Trade tariffs**

Weighted average applied tariff rate, expressed in percentage points | 2018 or most recent period available

The weighted mean applied tariff is the average of effectively applied rates weighted by the product import shares corresponding to each partner country. Applied tariffs are considered to be the tariff rates applied by a customs administration on imported goods. They are the rates published by national customs authorities for duty administration purposes.

Source: International Trade Centre (data received through direct communication).

**7.06 Complexity of tariffs**

Measures the complexity of a country’s tariff regime. The score ranges from 1 (very complex) to 7 (not complex) | 2018 or most recent period available

Tariff complexity is assessed on four criteria: tariff dispersion, the prevalence of tariff peaks, the prevalence of specific tariffs and the number of distinct tariffs. This index is calculated as the simple average of the normalized score of these four criteria.

Source: International Trade Centre (data received through direct communication).

**7.07 Border clearance efficiency**

Assesses the effectiveness and efficiency of the clearance process by customs and other border control agencies in the eight major trading partners of each country. The scale ranges from 1 (worst) to 5 (best). | 2018

More details about the methodology can be found at <https://lpi.worldbank.org/about>.

Source: The World Bank Group/Turku School of Economics, Logistics Performance Index 2018.

**Pillar 8: Labour market****8.01 Redundancy costs**

Measures the cost of advance notice requirements and severance payments due when terminating a redundant worker, expressed in weeks of salary | 2018

The average value of notice requirements and severance payments applicable to a worker with 1 year of tenure, 5 years of tenure, and 10 years of tenure is considered.

Source: World Bank Group, *Doing Business 2019: Training for Reform*.

**8.02 Hiring and firing practices**

Response to the survey question “In your country, to what extent do regulations allow for the flexible hiring and firing of workers?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**8.03 Cooperation in labour-employer relations**

Response to the survey question “In your country, how do you characterize labour-employer relations?” [1 = generally confrontational; 7 = generally cooperative] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**8.04 Flexibility of wage determination**

Response to the survey question “In your country, how are wages generally set?” [1 = by a centralized bargaining process; 7 = by each individual company] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**8.05 Active labour market policies**

Response to the survey question “In your country, to what extent do labour market policies help unemployed people to reskill and find new employment (including skills matching, retraining, etc.)?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**8.06 Workers’ rights**

Score adapted from the ITUC Global Rights Index, which measures the level of protection of internationally recognized core labour standards. The scale of this indicator ranges from 0 (no protection) to 100 (high protection) | 2019

Dimensions of labour protection include civil rights, the right to bargain collectively, the right to strike, the right to associate freely, and access to due process rights. The indicator does not consider firing regulations. Among countries rated as “D5” we distinguish between countries where workers have “non-access to rights” (Greece, Hong Kong SAR, Kuwait, Qatar, Saudi Arabia and the United Arab Emirates) and countries experiencing “breakdown of institution” (Afghanistan, Libya) or murders (Guatemala). We assign a score of 10 to the former case and 3 to the latter. More details about the methodology of the Global Rights Index can be found at <https://survey.ituc-csi.org/ITUC-Global-Rights-Index.html>.

Source: World Economic Forum calculations based on International Trade Union Confederation, 2019 Global Rights Index (<https://www.ituc-csi.org/rights-index-2019>).

**8.07 Ease of hiring foreign labour**

Response to the survey question “In your country, how restrictive are regulations related to the hiring of foreign labour?” [1 = highly restrictive; 7 = not restrictive at all] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**8.08 Internal labour mobility**

Response to the survey question “In your country, to what extent do people move to other parts of the country for professional reasons?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

This indicator does not apply to economies identified as city states: Bahrain, Brunei Darussalam, Hong Kong SAR, Kuwait, Malta, Qatar and Singapore.

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**8.09 Reliance on professional management**

Response to the survey question “In your country, who holds senior management positions in companies?” [1 = usually relatives or friends without regard to merit; 7 = mostly professional managers chosen for merit and qualifications] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**8.10 Pay and productivity**

Response to the survey question “In your country, to what extent is pay related to employee productivity?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**8.11 Ratio of wage and salaried female workers to male workers**

Illustrates the ratio of the percentage of women aged 15–64 participating in the labour force as wage and salaried workers to the percentage of men aged 15–64 participating in the labour force as wage and salaried workers | 2018 or most recent period available

Wage and salaried workers (employees) are those workers who hold the type of jobs defined as “paid employment jobs,” where the incumbents hold explicit (written or oral) or implicit employment contracts that give them a basic remuneration that is not directly dependent upon the revenue of the unit for which they work.

Source: World Economic Forum calculation based on International Labour Organization (ILO), *ILOSTAT* (<https://ilostat.ilo.org/>, accessed 22 April 2019).

**8.12 Labour tax rate**

Labour tax and contributions are the amount of taxes (at any level—federal, state or local) and mandatory contributions on labour paid by the business, expressed as a percentage of commercial profits | 2018

This measure includes government-mandated contributions paid by the employer to a required private pension fund or workers’ insurance fund. More details about this indicator can be found at <http://www.doingbusiness.org/Methodology/Paying-Taxes>.

Source: World Bank Group, *Doing Business 2019: Training for Reform*.

**Pillar 9: Financial system****9.01 Domestic credit to private sector**

The total value of financial resources provided to the private sector, expressed as a percentage of GDP | 2015–2017 moving average

This indicator is computed as the sum of loans, purchases of non-equity securities, trade credits and other accounts receivable that establish a claim for repayment provided by financial corporations to firms and households.

Source: World Bank Group, *World Development Indicators* database (<https://data.worldbank.org/>, accessed 02 April 2019).

**9.02 Financing of SMEs**

Response to the survey question “In your country, to what extent can small- and medium-sized enterprises (SMEs) access finance they need for their business operations through the financial sector?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**9.03 Venture capital availability**

Response to the survey question “In your country, how easy is it for start-up entrepreneurs with innovative but risky projects to obtain equity funding?” [1 = extremely difficult; 7 = extremely easy] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**9.04 Market capitalization**

The total value of listed domestic companies, expressed as a percentage of GDP | 2014–2016 moving average

Calculated as the share price of all listed domestic companies multiplied by the number of their outstanding shares. Investment funds, unit trusts and companies whose only business goal is to hold shares of other listed companies are excluded. Data are end-of-year values.

Sources: World Bank Group, *World Development Indicators* database (<https://data.worldbank.org/>, accessed 02 April 2019) and Global Financial Development Database (July 2017 edition); national sources.

**9.05 Insurance premium**

Life and non-life insurance premium volumes, expressed as a percentage of GDP | 2014–2016 moving average

Computed as the sum of life and non-life insurance premium volume divided by GDP. The premium volume is the insurer’s direct premiums earned (if property/casualty) or received (if life/health) during the previous calendar year.

Source: World Bank Group, *Global Financial Development Database* (2017 edition); national sources.

**9.06 Soundness of banks**

Response to the survey question “In your country, how do you assess the soundness of banks?” [1 = extremely low—banks may require recapitalization; 7 = extremely high—banks are generally healthy with sound balance sheets] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**9.07 Non-performing loans**

[The ratio of the value of non-performing loans divided by the total value of the loan portfolio of all banks operating in a country | 2017](#)

Defaulting loans are payments of interest and principal past due by 90 days or more. The loan amount recorded as non-performing includes the gross value of the loan as recorded on the balance sheet, not just the amount that is overdue.

Sources: International Monetary Fund, Financial Soundness Indicators ([data.imf.org/FSI](http://data.imf.org/FSI), accessed 29 March 2019); World Bank Group, *Global Financial Development Database* (accessed 28 March 2019); national sources.

**9.08 Credit gap**

[Measures the difference between the credit-to-GDP ratio and its long-term trend | 2017](#)

Computed as the difference between the latest "Domestic credit to private sector (as a percentage of GDP)" and its trend. Following the methodology from Bank of International Settlements, the trend value is calculated by applying a Hodrick–Prescott filter to the 15-year time series of the "Domestic credit to private sector (% of GDP)" indicator. More details about the methodology can be found at [https://www.bis.org/publ/qtrpdf/r\\_qt1403g.htm](https://www.bis.org/publ/qtrpdf/r_qt1403g.htm). Because of the special conversion applied to this indicator, the ranking for this indicator is based on progress scores rather than raw values.

Source: Author's calculations based on World Bank, *World Development Indicators* database (<https://data.worldbank.org/>, accessed 02 April 2019).

**9.09 Banks' regulatory capital ratio**

[Banks' regulatory capital ratio | 2015–2017 moving average](#)

This indicator measures the capital adequacy of deposit takers. It is a ratio of total banks' regulatory capital (shareholders' equity, disclosed and undisclosed reserves, revaluation reserves, general provisions and other instruments) to total banks' assets, weighted according to the risk of these assets. A log transformation is applied to the raw score before it is normalized to a 0-to-100 scale.

Sources: International Monetary Fund, Financial Soundness Indicators ([data.imf.org/FSI](http://data.imf.org/FSI), accessed 29 March 2019); World Bank Group, *Global Financial Development Database* (accessed 28 March 2019); national sources.

**Pillar 10: Market size****10.01 Gross domestic product**

[Gross domestic product \(GDP\) valued at purchasing power parity in billions of international dollars \(constant 2011 prices\) | 2018 or most recent period available](#)

Source: International Monetary Fund, *World Economic Outlook* database (April 2019 edition).

**10.02 Imports of goods and services**

[Imports of goods and services, expressed as a percentage of GDP | 2017](#)

This indicator illustrates the value of all goods and other market services received from the rest of the world, as a percentage of the country's GDP. Imports include the value of merchandise, freight, insurance, transport, travel, royalties, license fees and other services, such as communication, construction, financial, information, business, personal and government services. They exclude compensation of employees and investment income (formerly called "factor services") and transfer payments.

Source: World Trade Organization (WTO), *WTO Statistics Database*, accessed 01 May 2019.

**Pillar 11: Business dynamism****11.01 Cost of starting a business**

[Expressed as a percentage of the economy's income per capita | 2018](#)

The costs include all official fees and fees for legal or professional services if such services are required by law or commonly used in practice. Fees for purchasing and legalizing company books are included if these transactions are required by law. Although value-added tax registration can be counted as a separate procedure, value-added tax is not part of the incorporation cost. More details of the methodology can be found at <http://www.doingbusiness.org/Methodology/Starting-a-Business>.

Source: World Bank Group, *Doing Business 2019: Training for Reform*.

**11.02 Time to start a business**

[Number of calendar days needed to complete the procedures to legally operate a business | 2018](#)

The measure captures the median duration that incorporation lawyers or notaries indicate is necessary in practice to complete a procedure with minimum follow-up with government agencies and no unofficial payments. If a procedure can be sped up at additional cost, the fastest procedure, independent of cost, is chosen. More details about the methodology can be found at <http://www.doingbusiness.org/Methodology/Starting-a-Business>.

Source: World Bank Group, *Doing Business 2019: Training for Reform*.

**11.03 Insolvency recovery rate**

[Recorded as cents on the dollar recovered by secured creditors through judicial reorganization, liquidation or debt enforcement \(foreclosure or receivership\) proceedings | 2018](#)

The calculation takes into account the outcome—whether the business emerges from the proceedings as a going concern or the assets are sold piecemeal. Then the costs of the proceedings are deducted (1 cent for each percentage point of the value of the debtor's estate). Finally, the value lost as a result of the time the money remains tied up in insolvency proceedings is taken into account. More details about the methodology can be found at <http://www.doingbusiness.org/Methodology/Resolving-Insolvency>.

Source: World Bank Group, *Doing Business 2019: Training for Reform*.

**11.04 Insolvency regulatory framework**

[Score on an index that measures the adequacy and integrity of the legal framework applicable to liquidation and reorganization proceedings. Scores range from 0 to 16, with higher values indicating insolvency legislation that is better designed for rehabilitating viable firms and liquidating non-viable ones. | 2018](#)

The index is calculated as the sum of the scores on the commencement of proceedings index, management of debtor's assets index, reorganization proceedings index and creditor participation index. More details about the methodology can be found at <http://www.doingbusiness.org/Methodology/Resolving-Insolvency>.

Source: World Bank Group, *Doing Business 2019: Training for Reform*.

**11.05 Attitudes towards entrepreneurial risk**

[Response to the survey question "In your country, to what extent do people have an appetite for entrepreneurial risk?" \[1 = not at all; 7 = to a great extent\] | 2018–2019 weighted average or most recent period available](#)

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**11.06 Willingness to delegate authority**

Response to the survey question “In your country, to what extent does senior management delegate authority to subordinates?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**11.07 Growth of innovative companies**

Response to the survey question “In your country, to what extent do new companies with innovative ideas grow rapidly?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**11.08 Companies embracing disruptive ideas**

Response to the survey question “In your country, to what extent do companies embrace risky or disruptive business ideas?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**Pillar 12: Innovation capability****12.01 Diversity of workforce**

Response to the survey question “In your country, to what extent do companies have a diverse workforce (e.g. in terms of ethnicity, religion, sexual orientation, gender)?” [1 = not at all; 7 = to a great extent] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**12.02 State of cluster development**

Response to the survey question “In your country, how widespread are well-developed and deep clusters (geographic concentrations of firms, suppliers, producers of related products and services, and specialized institutions in a particular field)?” [1 = non-existent; 7 = widespread in many fields] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**12.03 International co-inventions**

Number of patent family applications with co-inventors located abroad per million population | 2013–2015 average

Computed as the sum of the patent family applications with at least one co-inventor located abroad, filed in at least two of the major five (IP5) offices in the World: the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the State Intellectual Property Office of the People's Republic of China (SIPO), and the United States Patent and Trademark Office (USPTO). Data is extracted from the PATSTAT database by earliest filing date and inventor country, using fractional counts, and expressed in applications per million population. A log transformation is applied to the raw score before it is normalized to a 0 to 100 scale.

Source: Organisation for Economic Co-operation and Development (OECD), STI Micro-data Lab: Intellectual Property database, (<http://oe.cd/ipstats>, May 2019).

**12.04 Multistakeholder collaboration**

Average score of the following three Executive Opinion Survey questions: “In your country, to what extent do people collaborate and share ideas within a company?” [1 = not at all; 7 = to a great extent]; “In your country, to what extent do companies collaborate in sharing ideas and innovating?” [1 = not at all; 7 = to a great extent]; “In your country, to what extent do business and universities collaborate on research and development (R&D)?” [1 = do not collaborate at all; 7 = collaborate extensively] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**12.05 Scientific publications**

Measures the number of publications and their citations, expressed at the country level | 2016–2018 average

The Index measures the number of published papers cited in other papers at least  $h$  times. The H-index reflects both the number of publications and the number of citations per publication. Only articles, reviews and conference papers are considered. The document universe is defined by those tracked by Scopus, an abstract and citation database of peer-reviewed literature: scientific journals, books and conference proceedings. A log transformation is applied to the raw score before it is normalized to a 0 to 100 scale.

**12.06 Patent applications**

Total number of patent family applications per million population | 2013–2015 average

Computed as the sum of the patent family applications filed in at least two of the major five (IP5) offices in the World: the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the State Intellectual Property Office of the People's Republic of China (SIPO), and the United States Patent and Trademark Office (USPTO). Data is extracted from the PATSTAT database by earliest filing date and inventor country, using fractional counts and expressed in applications per million population. A log transformation is applied to the raw score before it is normalized to a 0-to-100 scale.

**12.07 R&D expenditures**

Expenditures on research and development (R&D), expressed as a percentage of GDP | 2016 or most recent year available

Expenditures for research and development are current and capital expenditures (both public and private) on creative work undertaken systematically to increase knowledge—including knowledge of humanity, culture and society—and the use of knowledge for new applications. R&D covers basic research, applied research and experimental development.

**12.08 Research institutions prominence**

Measures the prominence and standing of private and public research institutions. | 2019

The score is computed as the sum of the inverse ranks of all research institutions in a country included in the SCImago Institutions Rankings (SIR). It comprises private and public universities, governmental agencies, corporate entities and health institutes. A log transformation is applied to the raw score before it is normalized to a 0 to 100 scale. More details about the SIR methodology can be found at <https://www.scimagoir.com/methodology.php>.

**12.09 Buyer sophistication**

Response to the survey question "In your country, on what basis do buyers make purchasing decisions?" [1 = based solely on the lowest price; 7 = based on sophisticated performance attributes] | 2018–2019 weighted average or most recent period available

Source: World Economic Forum, Executive Opinion Survey (various editions). For more details, refer to Appendix B of this report.

**12.10 Trademark applications**

Number of trademark applications per million population | 2015–2017 moving average

Number of international trademark applications issued directly or through the Madrid System by country of origin per million population. The residence of the first-named applicant is used to determine the origin of an application. When there are multiple applicants, only the first one is considered. This indicator is based on the concept of "equivalent count". That is, an application filed at a regional IP office is counted multiple times according to the number of its members. A log transformation is applied to the raw score before it is normalized to a 0 to 100 scale.

# The Executive Opinion Survey: The Voice of the Business Community

For the last 40 years, the Executive Opinion Survey (the Survey) has been a key ingredient of the *Global Competitiveness Report* series and other Forum benchmarking activities. It is the longest-running and most extensive survey of its kind and provides a yearly evaluation of critical aspects of competitiveness for which statistical data is missing because it is either impossible or extremely difficult to measure on a global scale. The aim of the Survey is to capture reality as well as possible, and business leaders are arguably the best positioned to assess the business environment in which they operate.

Through the Survey, respondents are asked to evaluate the situation for specific domains at the country level—such as the appetite for entrepreneurial risk, the level of corruption, and the extent of the skills gap. The results complement other statistical data to provide a more complete assessment of the business environment and the drivers of productivity.

The indicators derived from the Survey are used in the calculation of the Global Competitiveness Index 4.0 (GCI 4.0) in addition to a number of other World Economic Forum indexes, such as the Global Gender Gap Index and the Travel & Tourism Competitiveness Index; and several publications, including *The Inclusive Growth and Development Report* and *The Global Risks Report*; as well as many Forum initiatives. A truly unique source of data, the Survey has also long been used by numerous international and nongovernmental organizations, think tanks and academia for empirical and policy work.

## The survey 2019 in numbers

The 2019 edition of the Survey captured the views of 16,936 business executives in 139 economies between January and April 2019. Following the data editing process described below, a total of 12,987 responses were retained. In an effort to move away from paper surveys, this year more than half of the retained surveys (59.1%) were completed online (see Figure 1). The 2019 edition of the Survey was made available in 41 languages (see Table 1). Three additional countries are surveyed in 2019 compared to the previous edition (Barbados, Gabon, Madagascar) and two countries are not covered this year (Liberia and Sierra Leone).

## Survey structure, administration and methodology

The Survey comprises 78 questions. Most questions ask respondents to evaluate on a scale of 1 (considered among the worst in the world) to 7 (considered among the best in the world) the performance on various topics of the country where the respondent operates. The questions are organized into 10 topical areas: Infrastructure; Technology; Financial Environment;

Figure 2: Sample frame requirements

Foreign Trade and Investment; Domestic Competition; Business Operations and Innovation; Security; Governance; Education and Human Capital; and Risks. The 2019 edition of the Survey instrument is available in the Downloads section of the *Global Competitiveness Report's* page at <http://gcr.weforum.org/>.

The administration of the Survey is supervised by the World Economic Forum and conducted at the national level by the Forum's network of Partner Institutes. Partner Institutes are universities or other research organizations, business associations, competitiveness councils, or in some cases survey companies. These organizations have the private-sector network for reaching out to leading business executives and a firm commitment to improving the competitiveness of their respective economies (for the full list, see the Partners Institutes section of this report).

In administering the Survey and in order to gather the strongest dataset, Partner Institutes are asked to follow detailed sampling guidelines and collect the data in a specific timeframe. The collection process is based on best practices in the field of Survey administration and on discussions with survey experts. It is put in place to ensure that the sample of respondents is the most representative possible and comparable across the globe.

The sampling guidelines specify that the Partner Institutes create a sample frame (Figure 2)—a list of business executives from companies of various sizes and from the various sectors of activity.

The sample frame should reflect the structure of the economy as follows:

- It should be in proportion to the share of GDP by sector: agriculture, manufacturing industry, non-manufacturing industry (mining and quarrying, electricity, gas and water supply, construction), and services.
- It should ensure the representation of both large- (more than 250 employees) and small-sized companies (250 employees or fewer), again reflecting each sector. At least one-third of companies are large and one-third are small, and the remaining one-third are determined by the structure of the economy in proportion to the share of GDP by company size.
- It should ensure that the chosen companies also have a sufficiently wide geographical coverage.

The Partner Institutes are asked to separate the sample frame into two lists: one that includes only large firms, and a second that includes all other firms, retaining sectoral representation in both lists. Partner Institutes then randomly select from each list the firms that will receive the Survey.

The Survey is administered in a variety of formats. The primary method of administration is the online survey tool, but other methods are used: mail-in surveys, face-to-face interviews and telephone interviews.

In addition to administering the Survey, Partner Institutes play an active and essential role in disseminating the findings of *The Global Competitiveness Report* and other reports published by the World Economic Forum by holding press events and workshops to highlight the results at the national level to the business community, the public sector and other stakeholders.

### Data treatment and score computation

This section details the process whereby individual responses are edited and aggregated in order to produce the Survey question scores of each country. These are the results that, together with other indicators obtained from different sources, feed into the GCI 4.0 and other research projects.

### Data editing

Prior to aggregation, the respondent-level data is subjected to a careful editing process. The following responses are excluded from the dataset: surveys where the respondent gives the same answer to at least 80% of the questions; surveys with a completion rate inferior to 50%; respondents who are not based in the same

country as the Partner Institute; respondents who do not have the required level of seniority; and duplicate surveys—which can occur, for example, when a survey is both completed online and mailed in.

A univariate outlier test is then applied at the country level for each question of each survey. We use the standardized score—or “z-score”—method, which indicates by how many standard deviations any one individual answer deviates from the mean of the country sample. Individual answers with a standardized score greater than 3 are dropped. Additional statistical tests aimed at detecting responses that exhibit too little or too much variance across answers are used to exclude individual responses.

### Computation of single-edition country scores

We use a simple average to compute scores at the country level. As the sample frame aims to replicate an economy’s sectoral composition and includes companies of different sizes, the country-level score of each Executive Opinion Survey question is the arithmetic mean of all answers in each country. That is, for a given question, all individual answers carry the same weight.

Formally, the average of a Survey indicator  $i$  for country  $c$ , denoted  $q_{i,c}$ , is computed as follows:

$$q_{i,c} = \frac{\sum_j q_{i,c,j}}{N_{i,c}}$$

where  $q_{i,c,j}$  is the answer to question  $i$  in country  $c$  from respondent  $j$ ; and  $N_{i,c}$  is the number of respondents to question  $i$  in country  $c$ .

Once responses have been aggregated at the country level, a test to detect statistical outliers is run. We leverage the strong relationship between the indicators derived from the Survey and some 50 statistical indicators included in the GCI 4.0: countries doing well on these indicators tend to do well in the Survey. A univariate linear regression is used to predict the expected average score of Survey indicators based on the average performance in the other indicators. Average Survey scores that lie outside the 90% confidence interval around the predicted values are considered “outliers”. The scores of individual Survey indicators are systematically corrected by a factor corresponding to the distance between the observed average Survey score and the predicted Survey average at the limit of the confidence interval.

In addition, an analysis to assess the reliability and consistency of the Survey data over time is carried out. As part of this analysis, an inter-quartile range (IQR) test is performed to identify large swings—positive and negative—between two editions. For each country, we compute the year-on-year difference,  $d$ , in the average score of a core set of 53 Survey questions.

We then compute the inter-quartile range (i.e. the difference between the 25th percentile and the 75th percentile). Any value  $d$  outside the range bounded by the 25th percentile minus 1.5 times the IQR and the 75th percentile plus 1.5 times the IQR is identified as a potential outlier. This test is complemented by a series of additional empirical tests, including an analysis of five-year trends and a comparison of changes in the Survey results with changes in other indicators capturing similar concepts. We interview local experts and consider the latest developments in a country in order to assess the plausibility of the Survey results.

### Country score computation

For each country and each Survey question, in the general case, the final country score is a weighted average of the single-edition scores of the two most recent editions of the Survey. The weighted average approach makes results less sensitive to the specific point in time when the Survey is administered. Second, it increases the amount of available information by providing a larger sample size. Additionally, because the Survey is carried out during the first quarter of the year, the average of the responses in the first quarter of 2018 and the first quarter of 2019 better aligns the Survey data with many of the data indicators from sources other than the Survey, which are often annual-averages data.

The weighted scheme used to compute the final country score is composed of two overlapping elements. We place more weight on the year with the larger sample size to attribute equal weight to each response. At the same time, we attribute greater weight to the most recent sample because it contains most up-to-date information. That is, we also “discount the past.” Table 2 reports the exact weights used in the computation of the scores of each country.

The country scores thus obtained are then used for the computation of the Global Competitiveness Index 4.0.

Formally, for any given Survey question  $i$ , country  $c$ ’s score,  $q_{i,c}^{2018-19}$ , is given by:

$$q_{i,c}^{2018-19} = w_c^{2018} \times q_{i,c}^{2018} + w_c^{2019} \times q_{i,c}^{2019} \quad (1)$$

where  $q_{i,c}^t$  is country  $c$ ’s score on question  $i$  in year  $t$ , with  $t = 2018, 2019$ , as computed following the approach described in the text; and  $w_c^t$  is the weight applied to country  $c$ ’s score in year  $t$ .

The weights for each year are determined as follows:

$$w_c^{2018} = \frac{(1-\alpha) + \frac{N_c^{2018}}{N_c^{2018} + N_c^{2019}}}{2} \quad (2a)$$

and

**Note:** All statistics are computed following the editing of the data; see text for details. “—” indicates that there was no online administration of the Survey.

\* Weight applied to the country score in that edition of the Survey. See Box 1 for an example of a calculation.

† Share of surveys completed online (2019 only).

$$w_c^{2019} = \frac{\alpha + \frac{N_c^{2019}}{N_c^{2018} + N_c^{2019}}}{2} \quad (2b)$$

where  $N_c^t$  is the sample size (i.e. the number of respondents) for country  $c$  in year  $t$ , with  $t = 2018, 2019$ .  $\alpha$  is the discount factor that accounts for temporality set at 0.6.

Plugging Equations (2a) and (2b) into (1) and rearranging yields:

$$q_{ic}^{2018-19} = \frac{1}{2} \times \underbrace{\left[ (1-\alpha) \times q_{ic}^{2018} + \alpha \times q_{ic}^{2019} \right]}_{\text{discounted-past weighted average}} + \frac{1}{2} \times \underbrace{\left[ \frac{N_c^{2018}}{N_c^{2018} + N_c^{2019}} \times q_{ic}^{2018} + \frac{N_c^{2019}}{N_c^{2018} + N_c^{2019}} \times q_{ic}^{2019} \right]}_{\text{sample-size weighted average}} \quad (3)$$

In Equation (3), the first component of the weighting scheme is the discounted-past weighted average. The second component is the sample-size weighted average. These two components are given half-weight each. One additional characteristic of this approach is that it prevents a country sample that is much larger in one year from overwhelming the smaller sample from the other year. In the case of Survey questions that were introduced in 2019 for which, by definition, no past data exists, full weight is given to the 2019 score. For newly covered economies, this treatment is applied to all questions. For countries whose 2019 data were discarded, the results from the previous editions of the report are used instead. Box 1 provides an example of country score calculation.

### Box 1: Example of score computation

For this example, we compute the score of Argentina on the indicator Diversity of workforce, which is included in the Global Competitiveness Index 4.0 (indicator 12.01). The indicator is derived from the following Survey question: “In your country, to what extent do companies have a diverse workforce (e.g. in terms of ethnicity, religion, sexual orientation, gender)?” (1 = not at all, 7 = to a great extent). Argentina’s score was 4.76 in 2018 and 5.04 in 2019. The weighting scheme described above indicates how the two scores are combined. In Argentina, the size of the sample was 84 in 2018 and 121 in 2019. Using  $\alpha = 0.6$  as discount factor and applying Equations (2a) and (2b) yields weights of 0.405 for 2018 and 0.595 for 2019 (see Table 2). The final country score for this question is therefore:

$$\underbrace{0.405 \times 4.76}_{2018} + \underbrace{0.595 \times 5.04}_{2019} = 4.93$$

While numbers are rounded to two decimal places in this example and to one decimal place in result tables, full-precision figures are used in all calculations.

We are immensely grateful to Professor Xavier Sala-i-Martin, Chief Advisor of *The Global Competitiveness Report*, for his longstanding guidance and support.

We are extremely grateful to Louisa Djeroud for her invaluable and thorough research assistance and to our Forum colleague Pierre Souter, Lead Data Scientist, Strategic Intelligence, for his generous support and coding assistance. The team also gratefully acknowledges our colleagues in the Centre for the New Economy and Society for their input and continuous support.

We thank Hope Steele and Mike Fisher for their excellent editing work. A special thank you to Neil Weinberg, the *Global Competitiveness Report's* graphic designer of 10 years, for his friendship and professionalism, and we wish him all the best in his future endeavours. We thank illustrator Eleni Debo ([elenidebo.com](http://elenidebo.com)) for her artwork for this report.

We are also grateful to all the organizations from which we source the indicators that compose the Index. Without their tremendous efforts in collecting data, this work would not be possible. In particular, we thank the staff of the following organizations for providing privileged access to datasets, and for their help, guidance and feedback: Institute for Health Metrics and Evaluation, International Air Transport Association, International Energy Agency, International Monetary Fund, International Telecommunications Union, International Trade Centre, International Trade Union Confederation, OECD, UNESCO and the World Bank.

Finally, we acknowledge and thank the organizations listed on the following pages as our valued Partner Institutes, which help administer the Executive Opinion Survey and advance the competitiveness agenda in their respective economies.

# Partner Institutes

The World Economic Forum's Centre for the New Economy and Society is pleased to acknowledge and thank the following organizations as its valued Partner Institutes, without which the realization of *The Global Competitiveness Report 2019* would not have been feasible:

## **Albania**

Institute for Contemporary Studies & Tirana Business University College  
Artan Hoxha, President  
Helton Cevi, Project Coordinator  
Olton Valisi, Researcher

## **Algeria**

Centre de Recherche en Economie Appliquée pour le Développement (CREAD)  
Yacine Belarbi, Director  
Khaled Menna, Director of Macroeconomics and Economic Integration

## **Angola**

Jobartis  
João Freitas, Country Manager  
Luis Verdeja, Director

## **Argentina**

IAE Business School—Universidad Austral  
Eduardo Luis Fracchia, Director of Academic Department of Economics  
Martin Calveira, Research Assistant

## **Armenia**

Economy and Values Research Center  
Manuk Hergnyan, Chairman  
Sara Zakaryan, Research Associate  
Sevak Hovhannisyanyan, Board Member and Senior Associate

## **Australia**

Australian Industry Group  
Colleen Dowling, Senior Research Analyst  
Innes Willox, Chief Executive  
Julie Toth, Chief Economist

## **Austria**

Austrian Institute of Economic Research (WIFO)  
Alexandros Charos  
Christoph Badelt, Director  
Michael Peneder

## **Azerbaijan**

Azerbaijan Marketing Society  
Ashraf Hajiyev, Coordinator  
Fuad Aliyev, Consultant  
Nigar Huseynzade, Chairman

## **Bahrain**

Bahrain Economic Development Board  
Khalid Al Rumaihi, Chief Executive  
Nada Azmi, Director, Competitiveness Advocacy  
Rana Abdel Haq, Executive, Competitiveness Advocacy

## **Bangladesh**

Centre for Policy Dialogue (CPD)  
Fahmida Khatun, Executive Director  
Mustafizur Rahman, Professor and Distinguished Fellow  
Khondaker Golam Moazzem, Research Director

## **Barbados**

Sir Arthur Lewis Institute of Social and Economic Studies (SALISES)  
University of West Indies (Cave Hill Campus, Barbados)  
Don Marshall, Senior Fellow and Director  
Jonathan Lashley, Senior Fellow

## **Benin**

Institut de Recherche Empirique en Economie Politique (IREEP)  
Léonard Wantchekon, Director  
Stéphanie Houngan, Research Associate

## **Bosnia and Herzegovina**

MIT Center, School of Economics and Business, University of Sarajevo  
Zlatko Lagumdžija, Professor  
Jasmina Selimovic, Dean  
Amra Kapo, Assistant Professor

## **Botswana**

Botswana National Productivity Centre  
Letsogile Batsetswe, Research Consultant and Statistician  
Phumzile Thobokwe, Manager, Information and Research Services Department
